Intern JD

We are looking for a passionate and hands-on Robotics Software Intern to join our team. This role is ideal for students who are excited about building intelligent robots.
🔧 Responsibilities:
• Assist in the development and testing of robotic systems using ROS (Robot Operating System).
• Write and debug code in Python and C++ for perception, control, and navigation tasks.
• Contribute to simulation and real-world testing of robots.
• (Bonus) Support simple mechanical design tasks and 3D printing of custom components.
✅ Requirements:
• Background in robotics, mechatronics, computer engineering, or a related field.
• Experience with ROS, Python, and C++.
• Familiarity with version control tools (e.g., Git).
• Strong problem-solving skills and willingness to get hands dirty with real hardware.
• (Bonus) Experience with CAD tools (e.g., SolidWorks, Fusion 360) and operating 3D printers.

We are looking for a passionate Mechanical design and prototyping Intern to join our team. This role is ideal for students who are excited about building intelligent robots.
🔧 Responsibilities:
• Design mechanical parts and robot enclosures using CAD software (e.g., SolidWorks, Fusion 360, Onshape).
• Operate and maintain 3D printers to produce functional prototypes and test rigs.
• Assemble and iterate on physical hardware for robotic systems.
• Work closely with the software and hardware teams to integrate mechanical components.
• (Bonus) Assist with basic robot bring-up and sensor integration using ROS, Python, or C++.
✅ Requirements:
• Background in mechanical engineering, mechatronics, product design, or a related field.
• Proficiency with 3D modeling tools and experience with 3D printing workflows.
• Strong hands-on skills in mechanical prototyping and assembly.
• Basic understanding of mechanical tolerances and material properties.
• (Bonus) Familiarity with robotics software (e.g., ROS) or simple scripting (Python/C++).
